- ☐ Easy Cleaning & Maintenance Free
EZ Clean Glass / Custom Exterior Trim
- ☐ Reduce Energy Bills & UV Damage
Energy Miser Options
- ☐ Extend the Life of HVAC Units
Energy Miser Options
- ☐ Less Temperature Fluctuation / Air Drafts
Energy Miser Options
- ☐ More Curb Appeal & Resale Value
Colonial Grids / Transferable Warranty

Our 4 Step Installation Process

Custom Manufactured

After your window consultant inspects and measures your openings, the new windows are custom manufactured for a precise fit. Before leaving our state-of-the-art manufacturing facility, your new windows are inspected to ensure your complete satisfaction.

New Windows Installed

Your old windows are removed and your new windows are installed and fully insulated. The new windows are squared and plumbed to provide a good fit and proper operation. A bead of high performance sealant is applied around the entire perimeter to properly seal the installation.

Custom Exterior Trim (optional)

If you choose this popular option you will never have to paint the exterior casings around your new maintenance-free windows. Our installer will custom cut and fit aluminum capping material with a maintenance-free finish.

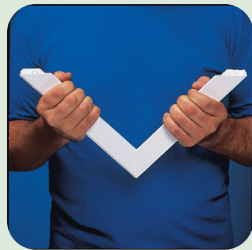

Final Adjustment and Inspection

Your new windows are inspected and any necessary adjustments are made for proper operation. All old windows and debris from the job are removed. All work areas are thoroughly cleaned up. You are then presented with a satisfaction survey.

Standards On All Models:

- Fusion welded sashes and master frame with full 3¼ inch depth
- All sash and frame members are made with low maintenance premium virgin vinyl that will not crack, chip, peel or warp (no regrind)
- Multi-chambered frame construction to add strength and thermal efficiency
- Clear 7/8 inch double insulated glass
- Warm edge spacer technology
- Extruded lift rails with no mechanical fasteners that could work loose
- Interlocking meeting rail for a tight seal between sashes
- Top and bottom sashes tilt in for easy cleaning
- Sturdy cam-action locks pull sashes tightly together
- Welded true sloped sill drains to exterior
- Interior Balance System Covers
- Double cam-action locks (in units over 25 inches wide)
- Dual vent latches for more secure ventilation
- Fin seal weather-stripping throughout
- Custom made to fit your openings
- Heavy duty screens with metal reinforced corners

Enhance your windows with these options:

- We have high performance glass options that meet and exceed Energy Star criteria in every climate zone.
- Full screen or full-flex to provide ventilation (1/2 screen standard on DH & Sliding)
- Flat, contoured, or SDL decorative grids
- Beige (Camel) Vinyl
- 4 woodgrains and 9 custom exterior colors
- Obscure privacy glass
- Advanced EZ Clean Glass Coating
- Sound Control Glass

- Available in white, beige, nine exterior colors & four woodgrains.

All models far exceed industry standards for air infiltration!

Our 9000 series 36 x 76 inch casement window has a 0.01 Air Infiltration Rating. When comparing Air Infiltration Ratings be sure you see the size, style, & model for the numbers listed.

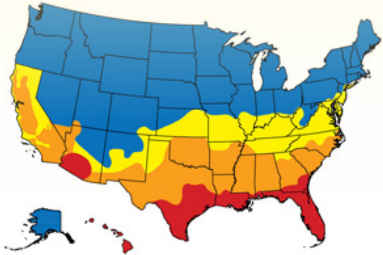

High Performance Glass Options

Choose a glass option that's right for your climate and budget.

The displayed NFRC ratings are based off the 9000 Series Double Hung window and may vary depending on size, series, type and options

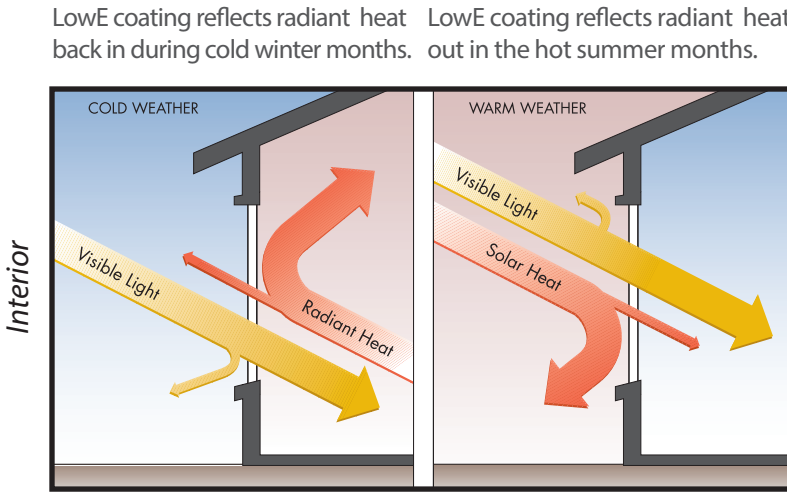

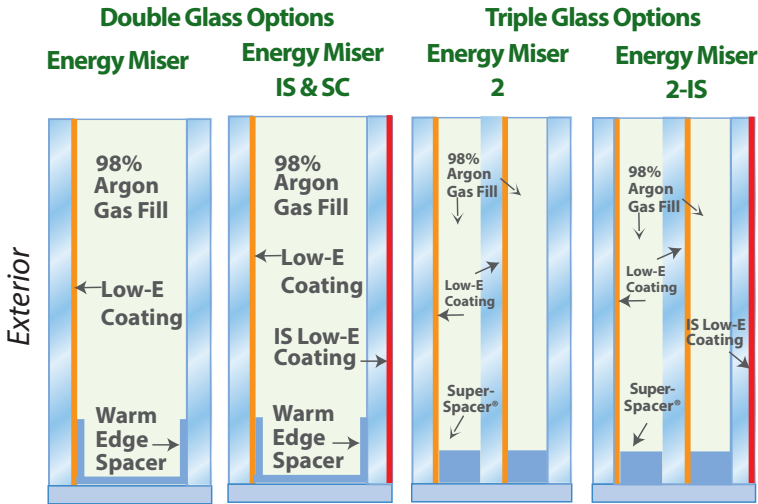

These popular options add high performance Low-E coatings and Argon inert gas to each insulated glass unit. The NFRC labeling program sets standards based on independent testing so that you can compare windows with confidence. Lower U-Factors save on heating cost while lower SHGC ratings save on cooling costs. The Low-E coating can be optimized for your climate zone to meet ENERGY STAR® guidelines. Our 9000 series with triple glass and three layers of Low-E coatings are the highest performance windows in our collection.

- U-Factor** – A lower U-Factor indicates a better performing window that can help reduce heating and cooling costs.
- Solar Heat Gain Coefficient (SHGC)** – The lower the number, the less solar heat gain and UV rays the window permits to pass through the glass.
- Internal Surface Low-E Coating (IS)** – An additional layer of Low-E that is on the glass facing the interior of the home. Improves U-Factor for northern climates.
- Solar Control (SC)** – A Low-E coating that is optimized for the southern climate zone or to reduce air conditioning cost in other climate zones on southern and western facing windows.

How Does Our High Performance Glass Technology Reduce Energy Loss?

A special Low-E (low emissivity) metallic coating reflects radiant heat out and away from entering your home in the hot summer months. In the cold winter months when the sun is lower in the sky the radiant heat may enter since the Low-E coating is selective based on the angle of the radiant heat. Also in the winter the coatings reflect radiant heat, that you paid for, back into your home performing double duty. Almost all visible light passes through so your home remains bright. Our special Low-E coatings also filter out damaging UV radiation to increase the lifetime of your carpets, draperies and furniture. Argon gas which is much more dense than air is pumped into the IG unit which reduces conduction of heat and cold through the unit. Our warm edge spacer technology reduces conduction around the perimeter of the IG unit. Solar Control (SC) Low-E is optimized

Decorative Options

Extruded or co-extruded colors and woodgrain interiors:

Interior	Exterior
<i>Golden Oak Woodgrain</i>	
<i>Colonial Cherry Woodgrain</i>	
<i>Natural Oak Woodgrain</i>	
<i>Rosewood</i>	
<i>Creamy White</i>	
<i>Camel Beige</i>	

Heat-reflective exterior paint:

Available with all interior colors

<i>Royal Brown</i>	<i>Evergreen</i>
<i>Black</i>	<i>Shark Skin</i>

Available in textured or smooth finishes

Decorative Grid Options (windows and patio doors)

Optional Woodgrain 7/8 inch	Optional Woodgrain 11/16 inch	Solid Colors Only 5/8 inch		

Oriel and Cottage Style Windows (available in all series)

<i>Oriel</i>	<i>Cottage</i>	<i>Oriel Custom</i>	<i>Cottage Custom</i>

Cottage and Oriel style windows typically come in 40/60, 60/40, 33/66 and 66/33, however custom configurations are available. When purchasing Colonial Grids with these styles, 40/60 or 60/40 are recommended to maintain a consistent grid size. Maximum bottom sash size is 40" tall. Maximum top sash is 40" tall (operable) or 44.5" (fixed top sash).

Textured Glass Options

Traditional Obscure

New Rain Glass

*Colors are reproduced as accurately as printer technology allows. Please see your Window Source representative for actual samples. Exterior paint is available in 6000 and 9000 series only and is warranted for 10 years. Black is available in textured finish only, Shark Skin is available in smooth finish only. Woodgrain interior finishes are available in 9000 series only and are vinyl laminate veneer. Grids are available in two-tone colors, including wood grains and solid colors for all painted colors.

Double-Hung & Picture Windows

Double-hung windows from The Window Source are just the right look for many American home designs. Optional colonial grids are perfect for many styles of homes. Both top and bottom sashes tilt in for easy cleaning on all double-hung models. Tilt latches lock the window back into the upright position when finished cleaning. Ventilate from either the top or bottom sashes with standard half screen or from top and bottom with optional full screens. Combine picture windows with either double-hungs or casements to open up your view.

Both top and bottom sashes tilt in for safe and easy cleaning.

This picture window flanked by two double hung windows features Golden Oak woodgrain interior finish.

These double hung windows feature standard white color with optional profile grids.

Two double cam action locks and keepers on units over 25" wide pull the sashes tightly together for security and a tight seal. The 3000 series is shown.

Double ventilation latches let the breeze in while adding security.

This picture window features Simulated Divided Lites.

Casement, Awning & Sliding Windows

These white casement windows are easy to operate above the kitchen sink area.

Heavy duty operating hardware opens and closes casement windows securely and easily. Folding handle is standard.

These awning windows feature an Earthtone exterior and white interior. They are mulled below picture windows and provide convenient ventilation.

Nothing opens up the view like a casement or awning style window from The Window Source. Heavy duty operating crank hardware opens the window to 90° for full ventilation (45° with awning). Casements are the perfect solution for those hard to get to areas like above the kitchen sink. Combine into multiple units or with picture windows to complement your home’s architecture. A heavy duty multipoint locking system secures the window tightly when closed.

This two-lite sliding window in standard white color features a transom above

Dual cam action locks on sliders over 25 inches high. The 9000 series is shown.

Sliding Window featuring obscure glass

Many ranch style homes are designed around the look of the horizontal sliding window. The Window Source has both two and three-lite sliding windows to maintain the unique appearance of this architectural style. Sliding panels glide on brass rollers and lift out for cleaning. Two sets of solid brass rollers provide for easy operation. The center fixed lite of the three-lite model can be either one half or one third width.

Brass rollers provide easy gliding operation on sliders.

Bay, Bow & Garden Windows

The high quality wood on Bay, Bow and Garden windows is able to be stained or painted to match existing woodwork

Bow, Bay and Garden projecting windows from The Window Source add a new depth and dimension to your home’s architecture. And you can replace a regular window with one of our projecting styles since they are custom made to fit any existing opening. Your new bow or bay can be filled with any combination of double-hungs, casements and picture windows.

This four-lite bow in White features two picture windows flanked by operating casements for ventilation on each side.

This four-lite bow window in Golden Oak features operating casements for ventilation on each side.

The Window Source garden window is a great place to put flowers and herbs. Light for the plants shines through the insulated glass roof and the trapezoid side units operate to provide plenty of ventilation.

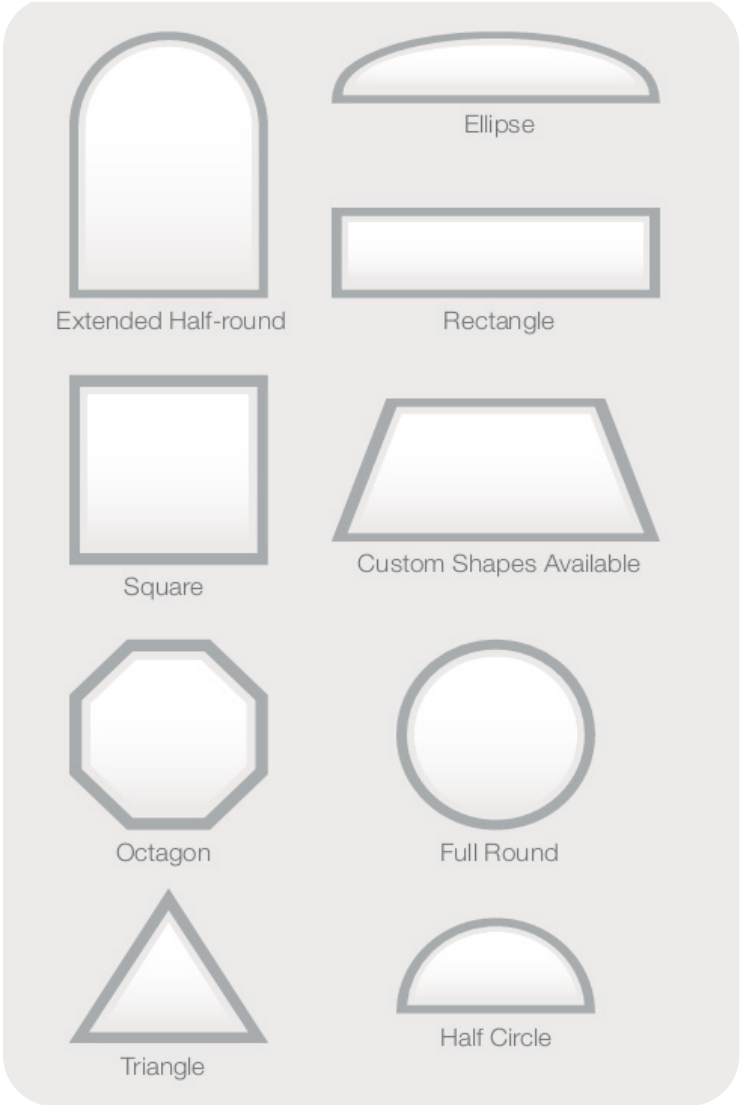

Garden windows under 36” in height include a single glass shelf. On units over 50” wide a coated wire shelf is included. An additional second shelf is available as an option.

Specialty Shapes & Hopper Windows

Does your home have architectural specialty shaped window designs? At The Window Source we carry all kinds of speciality shapes including trapezoid, triangle, rounded and octagon windows. These windows add beauty and style to a home that is timeless.

A basement hopper window opens inward from the top of the sash on a horizontal axis. By opening inward to ventilate, the opened sash does not interfere with the window well. This basement window can be made to fit the short height requirement found in many basement window openings. When closed and locked, it forms a tight seal to resist water penetration.

Sliding Patio Doors

Replace that old drafty hard to operate patio door with a new Window Source Model 9000 sliding patio door. It's reinforced with heavy gauge steel to make it strong and durable. A full interlocking meeting rail keeps air from leaking between the sashes. The sliding panel rides on cadmium plated tandem rollers with stainless steel ball bearings for easy operation. The threshold features a durable fiberglass sill to last a lifetime. There is a multi-point locking system to seal the door tightly. You'll enjoy the large open view from your new patio door.

Door Handle Finishes

This two-panel Model 9000 patio door in Colonial Cherry woodgrain interior finish features an Oil-Rubbed Bronze keylock and handle.

The Model 9000 Patio Door includes fusion welded panels made from pure virgin vinyl and tempered safety glass. It is available in a variety of styles to fit your home. Customize your new patio door with one of our 5 exterior vinyl colors or 4 painted colors and 2 interior colors or 4 natural woodgrain options. Note: not all color combinations are available, ask your Window Source consultant for details.

Peace of Mind Assurances

Lifetime Warranty

All Window Source products come with a limited lifetime warranty. You will have peace of mind knowing that you will only make this investment in your home once. Ask your window consultant for details.

Best Price Guarantee

We are confident that you will not find a better price for equal products and services anywhere. If you can, we will refund the difference. Ask your consultant for our written best price guarantee at participating locations.

Independently Certified NFRC Labels

All Window Source products come with voluntary National Fenestration Rating Council (NFRC) labels so that you can compare with confidence. You can rely on the labels and forget about all the sales gimmicks that you may hear from companies charging much higher prices. In fact, the US EPA relies on NFRC data to set its ENERGY STAR® guidelines.

ENERGY STAR® Rated Products

Be assured that you will gain valuable energy savings when you choose one of our High Performance Glass options. All of our products will meet ENERGY STAR® guidelines when ordered with the appropriate High Performance Glass option optimized for your climate zone.

No other source gives you such peace of mind and ease when choosing new windows for your home. Join our growing family of satisfied customers at The Window Source where America Shops for Windows, Siding & Doors.
